

Consult Case Management – SDOH Order Alert

In the 2024.1 MEDITECH 5.6 EHR Release, **Social Determinants of Health (SDOH)** was added to the **Health History Assessment**. A Case Management Consult order will reflex when Food, Living Situation, Safety, Transportation and/or Utility are identified as unmet. A new pop-up alert will now remind nursing what the order is for and provide instructions on how to order the consult.

The screenshot shows the 'Health History Assessment' form with the 'Patient has instability or unmet needs related to:' section. The 'Food' checkbox is checked, and the 'Living situation' checkbox is also checked. A yellow box highlights the text: 'Select all that apply if the patient is experiencing instability in any of the five social conditions which may impact their health or well-being. Case Management will be consulted to perform additional screening and potentially identify referrals or other needed services.' Below this, the 'Social Determinants of Health (SDOH) Alert' pop-up is displayed. The alert contains the following text: '*** Social Determinants of Health (SDOH) Alert ***', 'Patient meets the following SDOH criteria and requires a Case Management SDOH consult:', '-Safety', '-Transportation', '-Living situation', '-Food', '-Utility'. A red box highlights the instruction: 'Please submit the automated Consult Case Management - SDOH order that will appear upon filing this intervention.' Below this, it says: '*When placing order enter: Admitting Provider (TEST.DR) & Order Source (Z) \'Department/Process\'.' and '<End of text>'. At the bottom, it says '<Return>/<Esc>/<Exit> when done'.

Upon filing the **Health History Assessment**, the **Social Determinants of Health (SDOH) Alert** will serve as a reminder to the clinician to submit a **Consult Case Management – SDOH** order when one or more of the SDOH needs are identified as unmet:

- Food
- Living Situation
- Safety
- Transportation
- Utility

Note: The alert will include guidance when placing the order to:

- Enter the Admitting Provider as the ordering provider
- Use Order Source (Z) 'Department/Process'

The clinician will be taken directly into **Order Management** where they will then add the:

- **Admitting Provider** as the ordering provider **AND**
- Use **Order Source: 'Z'** (Department/Process) to ensure the consult is properly routed.

The screenshot shows the 'Order Management' form. The 'Ordering Provider' field is highlighted with a red box. The 'Order Source' field is set to 'Z'. A red arrow points to the 'Order Source' field. The form also includes fields for 'Other Provider' and 'Order Source'. At the bottom, there are 'OK' and 'Cancel' buttons.

OR Site Prep Solution Update

Iodine povacrylex alcohol (Duraprep) is being replaced with povidone-iodine plus isopropyl alcohol (PurPrep). This update will remove the *iodine povacrylex alcohol* response and add **povidone-iodine plus isopropyl alcohol** to possible responses.

The screenshot displays the 'Pre-op Prep Documentation' form. It highlights the 'Pre-op prep solution' and 'Site 1 prep solution' sections. In the 'Pre-op prep solution' list, option 9 'Povid-iodine isopro alcho' is highlighted with a red box and an arrow. In the 'Site 1 prep solution' list, option 9 'Povid-iodine isopro alcho' is also highlighted with a red box. The 'Also known as' list for option 9 includes 'PurPrep'. The form also shows fields for 'Pre-op prep site', 'Pre-op prep completed by', 'Pre-op prep solution', 'Prep site 1', 'Site 1 hair removed', 'Site 1 hair removal method', 'Site 1 hair removed by', 'Site 1 prep solution', 'Site 1 prepped by', and 'Site 1 prep comment'.

The following response fields have been updated with the 'Povidone-iodine plus isopropyl alcohol' prep solution also known as *PurPrep*:

- 1 - Home prep solution:
- 2 - Pre-op prep solution:
- 3 - Site prep solution fields*

- *Site prep solution* has multiple numbered instances. This update has been applied to all fields.

Note: In addition to this update, "Nonantibacterial soap" has been update to **Nonantimicrobial soap** (Option #7 in images).

This update affects the following interventions:

Nursing	Emergency	Surgery
Pre-Procedure Checklist	Pre-Op Pre-Proc Checklist	SURG: Prep Screen PACU
OB: OR Record		SURG: Pre-Procedure Checklist, Prep
		SURG: Prep Screen Pre-op
		SURG: Prep Screen Intra-op

Nursing & SUR Modules

Additional OB Response for MRCN

Manage Refer Contact Notify does not have appropriate OB responses needed. Free texting responses does not allow for auditing and safe oxytocin administration.
