

BD Pyxis™ MedStation™ ES Global Find

The Global Find feature allows a user to search for any active facility formulary item. If a medication is unavailable at a device, Global Find allows the end user to see where that medication is available and whether they have access to remove it. The Extended Global Find feature allows users to search for available medications within both Profile and Non-Profile device types throughout the facility.

Access Global Find via the Med Profile screen:

1. If you see the medication you want to remove greyed out on the Med Profile screen, select the **All Orders** tab if it isn't already selected. Select the medication.
2. A list of alternate locations will appear. These locations include items available at accessible devices within the same area without requiring a search (Alternate Med Location is a default setting, not a user permission). Select the **Find More** hyperlink, which is related to Global Find, to search both inside and outside the area.

3. Global Find results will list other devices where the medication is available and accessible.
4. Select the chevron to show/hide devices associated with an area.

Note: If a user has the Extended Global Find permission, Global Find will search and display all facility Profile and Non-Profile device types in which the item is available.

Access Global Find via the Home screen:

1. On the Home screen, select **Global Find**.

Note: Depending upon your permissions, you may need to select **More**, then select **Global Find**.

2. Enter the medication name in the search box on the Global Find screen. A list of medications that match your search will display. Select the medication then select **Accept**.
3. You will see the list of devices where the medication is available and accessible.
